RAQMANA beyond technology

MEA Distributer

RESILIENCE IS NOT DEFENSE

The Future of Cyber Defense is Here.

We don't just detect threats—
we eliminate them before they happen.

9+ Patents | Proven Market Success

THE FUTURE OF CYBER DEFENSE IS HERE

cyber crucible

THE PROBLEM

Hackers are evolving. Resilience solutions are not defense.

90% of ransomware victims paid the ransom in 2023.

Cyber Crucible customers paid $0.

Hackers use sophisticated tradecraft and AI to outmaneuver traditional defenses.

Signature-based detection fails against zero-day threats.

EDR, XDR, and MDR react too late...

only after an attack begins

Once data is stolen or encrypted...

it's too late.

THE FUTURE OF CYBER DEFENSE IS HERE

cyber crucible

RESILIENCE SELLS SUBSCRIPTIONS
Defense Stops Hackers

Cyber Crucible is the only product on the market that prevents Info THEFT, IDENTITY THEFT, and RANSOMWARE with a

100% SUCCESS RATE

01 **NO** Signatures

02 **NO** Human Intervention

03 **NEAR REAL-TIME** Prevention *<200ms*

cyber crucible

THE THREE Core Threats

01

Identity Theft

Digital identity information is a prime target from the first steps of an attack.

01

Info Theft

Access to keys, tokens, and passwords is determined instantly, often with no employee intervention.

03

Encryption (Ransomware)

AI-powered analysis of running programs detects malicious behavior before any data is accessed, while advanced hacker deception technology prevents ransomware from encrypting a single file.

THE FUTURE OF CYBER DEFENSE IS HERE

HOW CYBER CRUCIBLE WORKS

Kernel-level security prevents ransomware, data theft, and identity compromise before execution.

Injects decoy data to lure and detect threats early.

Processes security telemetry locally to minimize cloud reliance and improve speed.

Blocks unauthorized access to sensitive data at the kernel level.

cyber crucible

COMPETITIVE LANDSCAPE

EDR, XDR & MDR vs. Cyber Crucible

Resilience Solutions are designed to Fail

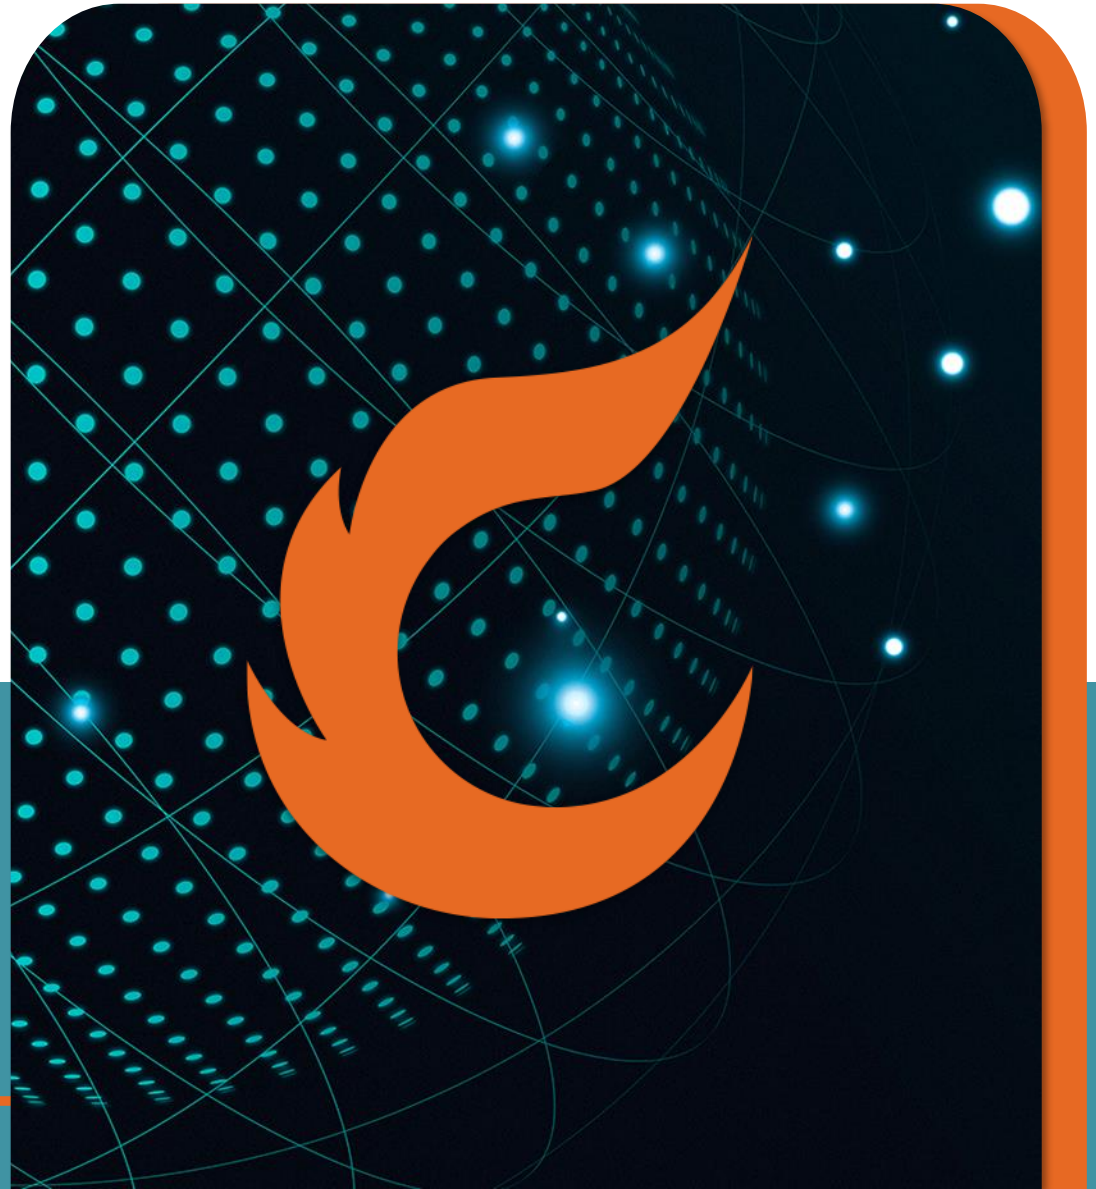

Feature	EDR/XDR/MDR	Cyber Crucible
Response Time	Minutes to hours	<200 ms
Detection Method	Signature-Based	Behavior-Based
Zero-Day Attack Protection	Partial	Full
Human Dependency	High	None
Autonomous Prevention	✗ No	✓ Yes

Cyber Crucible is the only AI-driven cybersecurity solution that prevents threats in real-time.
